

Do you want to learn more about **Medication-Assisted Treatment (MAT)?**

Have you obtained a buprenorphine waiver, but have apprehension about starting a program in your practice?

Are you interested in acquiring additional information about MAT to prepare for obtaining a buprenorphine waiver in the future?

Would you like to consult with medical colleagues about complicated opioid cases?

The Arizona State University [Extension for Community Healthcare Outcomes](#) (Project ECHO) team and the [Center for Applied Behavioral Health Policy](#) (CABHP) are excited to announce the MAT (Medication-Assisted Treatment) ECHO program, in partnership with [Blue Cross Blue Shield of Arizona](#) (BCBSAZ) and [HonorHealth](#).

The MAT ECHO aims to establish a statewide learning collaborative to scale evidence-based education and practice in the management of patients with opioid use disorder (OUD).

A MAT expert team, the 'hub,' will mentor and share their expertise across a web-based network via case studies, case consultation, and lecture, enabling medical providers to treat patients with OUD in their own communities.

Please complete this interest form to remain on our contact list for the January 2020 launch of the ASU MAT ECHO!

The MAT ECHO will:

- Convene a 1-hour web-based teleconference (via [Zoom Meetings](#)) on a biweekly basis
- Optimize participants' knowledge on treating patients with OUD
- Foster a learning community of Medication-Assisted Treatment providers across Arizona
- Offer learning opportunities in evidence-based and best practices for OUD **at no cost**

- Provide an opportunity for medical providers to earn **CME** credit for participation (1 hour per ECHO session)
